Summary

Software Engineer with over five years of full stack web development experience, specializing in React, Angular, Node.js, and modern frontend and backend frameworks. Proven track record modernizing legacy codebases, building responsive user interfaces, and implementing RESTful services with database solutions to improve performance and reliability.

Technical Skills

- **Programming Languages:** JavaScript (ES6), TypeScript, SQL, HTML, CSS
- **Frontend Frameworks:** React, Angular
- **Backend Technologies:** Node.js
- **Databases, Cloud & Tools:** MongoDB, PostgreSQL, AWS, GCP, Docker, Git, Jest
- **Architecture & APIs:** REST APIs, Client-Server Architecture, GraphQL

Professional Experience

Level Up

Technical Program Manager

May 2025 - Present

Ho Chi Minh, VN

Facilitate career development programs and mentorship initiatives for university students

- Led and executed 10+ career development workshops and large-scale events (50-250 participants)
- Mentor university students in professional skills and career readiness
- Designed and delivered training programs focused on English, technology, and professional skills

WebConnex

Software Engineer

Sep 2021 - May 2025

Remote, CA

Developed and maintained features across billing, mobile, and core platforms, enhancing user experience.

- Developed and maintained features across billing, mobile, and core platforms using Node.js and implemented REST APIs, improving user experience and client-server architecture
- Migrated a legacy Angular codebase to React, modernizing the frontend stack for improved performance.
- Implemented alerting and monitoring systems to increase platform reliability and performance.

Sam's Club (Walmart Inc.)

Backend Engineer

Jun 2020 - Oct 2020

Remote, CA

Built automated testing and internal tools to ensure catalog data integrity and system reliability

- Built automated test suites for client-server catalog system with 10M+ products, ensuring data integrity
- Developed internal product lookup tool using Next.js, reducing issue resolution time from hours to minutes
- Served as reliability engineer supporting critical events (Black Friday, Cyber Monday)

Intreecate

Software Engineer

Sep 2018 - Jul 2019

Remote, CA

Contributed to frontend architecture and backend infrastructure for web application development

- Improved front-end architecture using React, applying frontend frameworks best practices and Tailwind to optimize GraphQL query performance
- Created reusable component library, establishing design system foundation

Coach & Crew

Software Engineer Intern

Jun 2020 - Oct 2020

Remote, CA

Worked on a team building a social-based sports app for people to train or try a sport with coaches and locals

- Built frontend architecture using Angular and TypeScript for social sports platform
- Developed real-time features for coach-athlete matching system across distributed team

Projects

Star-Advisor

- Developed responsive, user-friendly travel booking interface using React, HTML, CSS, and JavaScript to enable online reservations and seamless user experiences
- Implemented full-stack RESTful API with Node.js, Express, and MongoDB following TDD principles, managed source code and version control with Git
- Achieved 99.9% uptime and PageSpeed score of 99 through performance optimization

Education

Hack Reactor | *Advanced Software Engineering Immersive Program*

2020

California Polytechnic University of Pomona | *Bachelor of Science, Biology*

2019
